Technical defense — deck changes

From the first-review deck to the supervisor's nine-section outline, in English

---

LeaseManager — office lease management platform
Final year project · ESPRIT × Quicky Prime · Marwan Hamed

Who this is for

Claude Desktop, *editing the existing deck "LeaseManager — Final Year Project Presentation (ESPRIT 2026)" (30 slides). Every slide below says what to do with it (keep, edit, move, create, delete), gives the exact text, and keeps the speaker note separate.*
Marwan: attach this PDF together with the screenshots in `docs/defense-screens/` *and the diagrams in* `docs/diagrams/`*, so Claude Desktop can place the images.*

Figures

Every number in this brief was checked on 27 October 2026 against the code and the running application: counts from the source, 42/42 access-audit probes from a live run, 297 automated tests from the test suites. Where the deck's figure was already right, it is left alone.

Three things only you can confirm

The sprint dates (slide 19), the Scrum master and product owner (slide 18), and the board tool you used (slide 18). The brief proposes them from what was delivered and marks them; do not present them unchecked.

SECTION 0

The new outline

The supervisor's nine sections, in English, and how to apply this brief

The supervisor's outline, translated

#	Supervisor's outline (French)	Section title in the deck (English)	Slides
01	Organisme d'accueil	Host organisation	2 (+1 optional)
02	Problématique	Problem statement	3
03	Étude et critique de l'existant	Study and critique of existing solutions	3
04	La solution proposée	Proposed solution	5
05	La méthodologie adoptée	Adopted methodology	4 — new section
06	Besoins fonctionnels et non fonctionnels	Functional and non-functional requirements	5 (+1 optional)
07	Technologies et outils utilisés	Technologies and tools used	3
08	Les parties réalisées	Completed work	9 (+3 optional)
09	Conclusion et perspectives	Conclusion and perspectives	5

Cover, agenda and the closing slide bring the core deck to **42 slides**, nine of them section dividers that take a few seconds each: about 30 content slides, **20 to 22 minutes** at a steady pace. The optional slides add about three minutes; leave them out if the slot is 20 minutes.

What changes, in short

- **New section 05 — Adopted methodology** (Scrum): four new slides.
- **The former "Design" section is dissolved**: the class diagram moves into *Proposed solution*, the use case diagram into *Requirements*. The supervisor's outline has no design section, and both diagrams belong where they now go.
- **"Progress" becomes "Completed work"** and gains six slides of real screens from the running application.
- **"What is not done yet" becomes "Current limitations"** inside the conclusion: the project stops here, so it is no longer progress, it is the honest boundary of the result.
- **One figure changes**: 252 automated tests become **297**, on slides 24 and 29. Everything else in the deck was re-counted and stands.

Rules for Claude Desktop

- **Keep the deck's visual identity**: dark navy starfield background, white bold headings, the periwinkle/blue accent, numbered section dividers over the Earth image, rounded cards. New slides must be indistinguishable in style from the existing ones.
- **All slide text in English.** The French titles in the table above are for reference only; they go on no slide.
- **Actions**: **KEEP** = leave the slide exactly as it is (only renumber the page); **EDIT** = same slide, change only what is listed; **MOVE** = same slide in a new position, content unchanged unless listed; **NEW** = create it in the deck's style; **DELETE** = remove it; **OPTIONAL** = create only if the user asks for the longer version.
- Section numbers on dividers and in each slide's eyebrow label (e.g. "04 · PROPOSED SOLUTION") must follow the new order. Slide page numbers are renumbered at the end.
- Screenshots: insert the PNG from `docs/defense-screens/` (2400×1350, 16:9) inside a rounded frame with a thin accent border; never stretch, never crop away the application's header. Diagrams come from `docs/diagrams/`.
- Speaker notes ("Say this") go in the notes field, never on the slide.

SECTION 0

From the old deck to the new one

Each of the 30 current slides, and where it goes

Old	Current slide	Action	New
1	Cover	KEEP	1
2	Agenda	EDIT — nine new section names	2
3	Divider 01 · Host organisation	KEEP	3
4	Quicky Prime	KEEP	4
5	Divider 02 · Problem statement	KEEP	5
6	The question	KEEP	6
7	Three difficulties inside the question	KEEP	7
8	Divider 03 · Existing solutions	EDIT — title	8
9	The platforms already on the market	KEEP	9
10	What they don't cover	EDIT — title	10
11	Divider 04 · Proposed solution	KEEP	11

30	Questions	KEEP	42

New slides: 16–19 (methodology), 22 (main functional requirements), 27 (development tools), 31–36 (screens of the completed work) and 38 (conclusion). Optional: 4b, 23b, 36b, 36c and 36d.

SECTION —

Cover and agenda

2 slides

Slide 1

Cover

KEEP

Old slide 1. Title, presenter and both supervisors are correct as they are.

Slide 2

Outline of the presentation

EDIT

Old slide 2. Keep the layout (numbered tiles, Earth on the left); replace the nine labels.

On the slide

01 Host organisation
02 Problem statement
03 Study and critique of existing solutions
04 Proposed solution
05 Adopted methodology
06 Functional and non-functional requirements
07 Technologies and tools used
08 Completed work
09 Conclusion and perspectives

Layout — two columns as now: 01–05 on the left, 06–09 on the right. Labels 03 and 06 are long: let them wrap onto two lines rather than shrinking the type.

Say this (speaker notes, not on the slide)

Nine sections, in the order the supervisor asked for. The heart of the talk is 04, 06 and 08: the solution, what it had to do, and the platform running.

SECTION 01 · supervisor's outline: *Organisme d'accueil*

Host organisation

2 slides · under two minutes

Slide 3 — **Divider 01 · Host organisation** — KEEP

Old slide 3.

Slide 4 — **Quicky Prime** — KEEP

Old slide 4. Positioning, sector, location, team size and Sawti, sourced from the company's LinkedIn page.

Say this (speaker notes, not on the slide)

A small AI-focused firm in Sousse. Two sentences, then move on: this section is expected, but it earns no technical marks.

Slide 4b — **The assignment** — OPTIONAL

New. Only if the supervisor wants the internship framed before the problem.

On the slide

The brief — design and build a web platform that lets property companies lease office space to other companies, from the first public enquiry to the collected rent.

Period — 15 February – 15 August 2026 (six months)

Team — one developer, a product owner at Quicky Prime

The constraint that shaped everything — several competing property companies on one installation

Layout — four short lines on a single card, the last one in the accent colour.

Confirm before presenting — do not present this unchecked

"A product owner at Quicky Prime" must match slide 18.

Say this (speaker notes, not on the slide)

This is the brief I was given. The last line is the one that drives the rest of the talk.

SECTION 02 · supervisor's outline: *Problématique*

Problem statement

3 slides

Slide 5 — **Divider 02 · Problem statement** — KEEP

Old slide 5.

Slide 6 — **The question** — KEEP

Old slide 6. The single question this project answers.

Say this (speaker notes, not on the slide)

Read the question slowly. Then name the three difficulties inside it, which the next slide lists.

Slide 7 — **Three difficulties inside the question** — KEEP

Old slide 7. Isolation, process, model.

SECTION 03 · supervisor's outline: *Étude et critique de l'existant*

Study and critique of existing solutions

3 slides

Slide 8 — **Divider 03** — EDIT

Old slide 8. Change the title and subtitle only.

On the slide

03

Study and critique of existing solutions

Four platforms on the market, and the gaps that matter here

Slide 9 — **The platforms already on the market** — KEEP

Old slide 9 — this is the study: Nexudus, OfficeRnD Flex, Yardi Kube, Optix, with their sources.

Slide 10 — **Critique: what they don't cover** — EDIT

Old slide 10 — this is the critique. Change only the title, from "What they don't cover" to "Critique: what they don't cover". The two gap rows stay as they are.

Say this (speaker notes, not on the slide)

Each of these products isolates one operator from another. None has a second level of client underneath, and none models an intake that happens in person. That is the space this project fills.

SECTION 04 · supervisor's outline: *La solution proposée*

Proposed solution

5 slides

Slide 11 — **Divider 04 · Proposed solution** — KEEP

Old slide 11.

Slide 12 — **A three-level tenancy model** — KEEP

Old slide 12.

Slide 13 — **One record, two owners** — KEEP

Old slide 13.

Slide 14 — **Class diagram: the business core** — MOVE

Old slide 22, moved here from the dissolved Design section. Change its eyebrow label to "04 · PROPOSED SOLUTION"; content unchanged (diagram `docs/diagrams/02p-class-core.png`*).*

Say this (speaker notes, not on the slide)

The same duality as the previous slide, now drawn formally: the composition chain Tenant, Building, Floor, Space is the landlord's path; the tenant_id on Booking and MaintenanceTicket is the renter's.

Slide 15 — **Deployment architecture** — MOVE

Old slide 14, one position later. Content unchanged.

SECTION 05 · supervisor's outline: *La méthodologie adoptée*

Adopted methodology

4 new slides

Slide 16 — **Divider 05 · Adopted methodology** — NEW

Copy the style of the other dividers (Earth arc at the top, large numeral).

On the slide

05

Adopted methodology

Scrum: the platform delivered in sprints, reviewed with the company

Slide 17 — **Why Scrum** — NEW

On the slide

1 · Requirements that moved — The specification asked for one level of multi-tenancy; the business turned out to need two, nested. A design fixed up front would have built the wrong model.

2 · A product owner on site — Quicky Prime reviewed a working increment at the end of each sprint and reordered what came next.

3 · The riskiest requirement handled continuously — Isolation is not a feature delivered once: every sprint put its new routes behind the same access policy, with their own tests.

Short iterations · a working increment every sprint · the backlog reordered at every review

Layout — three numbered cards stacked like old slide 7 (“Three difficulties”), the italic line as a bottom bar in the accent colour.

Confirm before presenting — do not present this unchecked

Card 2 and the bottom line describe how the reviews went. Keep them only if that is how your sprints actually ran; otherwise soften to “reviewed regularly with the company supervisor”.

Say this (speaker notes, not on the slide)

The first card is the strongest argument, and it is the project's own story: the second tenancy level was discovered, not specified. A process that waits for a complete specification would have found it at the end.

Slide 18

Roles, artefacts and ceremonies

NEW

On the slide

Roles

- Product owner — Mr Hassen Amri, Quicky Prime
- Scrum master — *[to confirm]*
- Development team — Marwan Hamed

Artefacts

- Product backlog — user stories grouped by actor: visitor, platform owner, landlord staff, renter
- Sprint backlog — the stories taken into the sprint
- Increment — a working build, demonstrated at the review

Ceremonies

- Sprint planning · short daily follow-up · sprint review with a demo · retrospective
- Sprints of three weeks · board: *[Jira / Trello / GitHub Projects — to confirm]*

Layout — three columns (Roles, Artefacts, Ceremonies) as rounded cards, each with its three lines.

Confirm before presenting — do not present this unchecked

Who acted as Scrum master. In a one-developer internship this is usually the company supervisor or yourself; name whoever actually did it.
The board tool, the sprint length (three weeks is proposed) and what your daily follow-up was. If there was no daily meeting, write "daily log" instead.

Say this (speaker notes, not on the slide)

One developer means Scrum adapted, not Scrum abandoned: the roles exist, the reviews happened with the company, and the increment was always something that ran.

Slide 19

Sprint plan

NEW

On the slide

Sprint	Dates	Goal	Delivered
0	15 Feb – 7 Mar	Analysis and set-up	Study of existing solutions, requirements, architecture, development environment and CI
1	8 – 28 Mar	Identity and access	Sign-in with refresh sessions, nine roles, three-level organisations
2	29 Mar – 18 Apr	Portfolio and dashboards	Buildings, floors, spaces, floor map, one dashboard per role
3	19 Apr – 9 May	Public discovery	Public map, published listings, guest and company applications
4	10 – 30 May	Booking workflow	Twelve booking states, reception intake (call, visit, documents), overlap check
5	31 May – 20 Jun	Leases and billing	Contracts, invoices, cash / transfer / cheque payments, promo codes, add-ons
6	21 Jun – 11 Jul	Operations	Maintenance tickets, live notifications, audit log, analytics, exports
7	12 Jul – 1 Aug	AI features	Ticket triage, space-finder assistant, document reading
8	2 – 15 Aug	Hardening and delivery	Cross-tenant audit (42 probes), automated tests, Docker deployment

Layout — a horizontal timeline from 15 February to 15 August with nine bars (S0–S8), each labelled with its goal; the "Delivered" column becomes the small text under each bar. If it does not fit, two rows of bars (S0–S4, S5–S8).

Confirm before presenting — do not present this unchecked

The dates and the contents are a proposal, *reconstructed from what was delivered and the only two dated milestones in the repository: role-based sign-in on 28 March (end of sprint 1) and the per-role dashboards on 6 April (sprint 2). Replace them with your real sprint log.*
The repository also shows hardening, AI and Docker work committed in September. If that work happened after 15 August, add a **Sprint 9 · stabilisation (September–October)** *bar rather than squeezing it into August.*

Say this (speaker notes, not on the slide)

Each sprint closed with something that ran. The order follows the business chain: who you are, what you own, how a visitor finds it, how a booking becomes a lease, how the lease is billed, then operations, then AI, then proof.

SECTION 06 · supervisor's outline: *Besoins fonctionnels et non fonctionnels*

Functional and non-functional requirements

5 slides (+1 optional)

Slide 20 — **Divider 06** — MOVE

Old slide 15 (was 05). Change the numeral to 06, the title and the subtitle.

On the slide

> **06**
>
> **Functional and non-functional requirements**
>
> Who uses the platform, what it must do, and how well

Slide 21 — **Actors and use cases** — MOVE

Old slide 21, moved from the dissolved Design section. Retitle it "Actors and use cases" and change its eyebrow to "06 · REQUIREMENTS". Diagram, "What it shows" and "Why a receptionist?" unchanged (`docs/diagrams/01-use-case-global.png`).

Say this (speaker notes, not on the slide)

Nine actors across three levels. The receptionist is the actor other systems do not have: it exists because a lease here is concluded in person.

Slide 22 — **Main functional requirements** — NEW

On the slide

Module	The platform must…	Main actors
Identity and organisations	sign users in with refresh sessions; manage nine roles over three tenancy levels; create a renter company from an approved application	Platform owner, client admin
Portfolio	manage buildings, floors and spaces (seven types); place spaces on a floor map; publish vacancies to the public map	Manager
Applications and bookings	take guest and company applications; run the intake (call, visit, documents, signature); book rooms with an overlap check	Visitor, receptionist, manager, renter
Leases and billing	issue lease contracts; invoice rent and one-off charges in QAR; record cash, transfer and cheque payments; promotion codes and add-ons	Manager, finance, renter admin
Maintenance	report issues on occupied spaces; suggest category, priority and technician; assign, accept, resolve, close	Renter, manager, technician
Oversight	dashboards and analytics per role; audit log; CSV and Excel exports; live notifications	All staff roles

Layout — a six-row table in the style of old slide 9 (blue header bar, rounded rows).

Say this (speaker notes, not on the slide)

Six modules, one row each. The next slide stops on the four requirements that were harder than they look.

Slide 23 — **Functional requirements worth stopping on** — MOVE

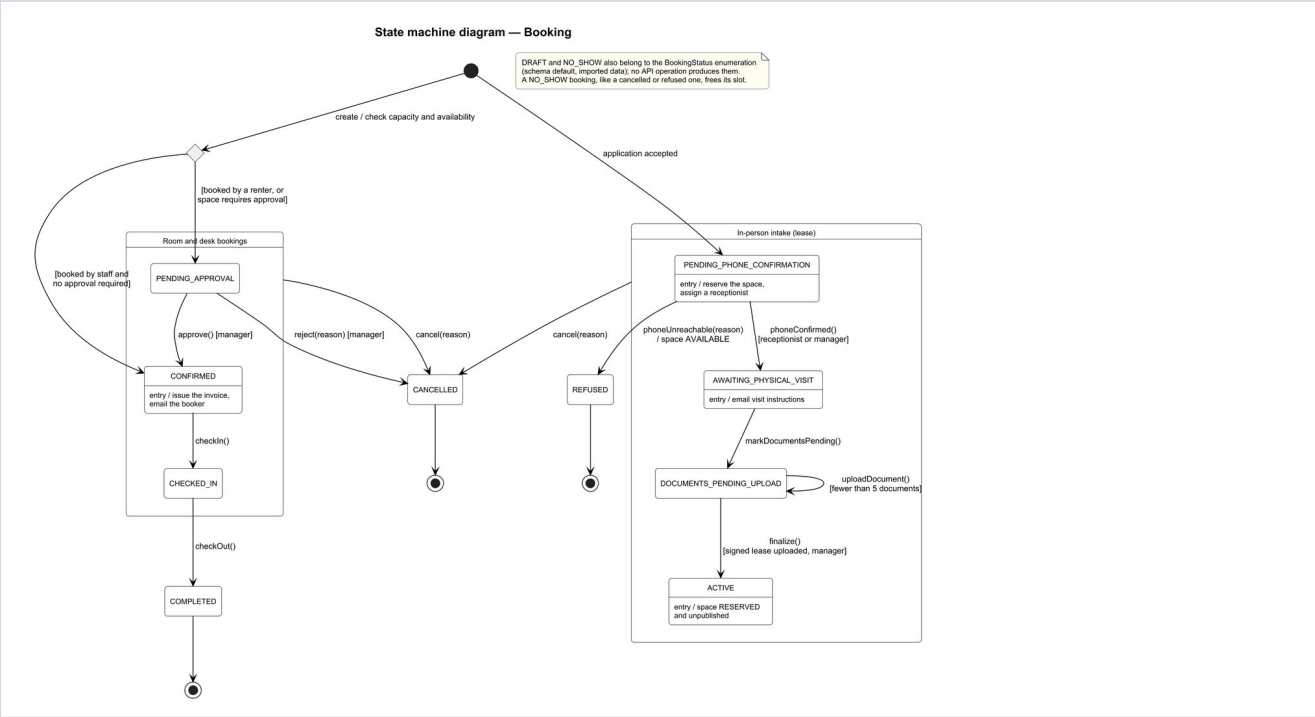

Old slide 16. Change the eyebrow to "06 · REQUIREMENTS"; content unchanged ("Twelve states, not four" is verified: the booking model has exactly 12 statuses).

Slide 23b — The booking lifecycle

OPTIONAL

New. The state diagram behind "Twelve states, not four": `docs/diagrams/13-state-booking.png`.

On the slide

Layout — the diagram on the left two thirds; on the right, the in-person phase highlighted: pending phone confirmation → awaiting visit → documents pending → active.

Slide 24 — Non-functional requirements

MOVE

Old slide 17. Change the eyebrow to "06 · REQUIREMENTS", then update two figures:

On the slide

Requirement	How it is met	Evidence
(eight rows unchanged)		
Maintainability	Modular back end, CI/CD, Swagger	**297 tests** (281 server, 16 client) · CI on push and PR
Confidentiality *(new row, optional)*	Password hashes and session tokens stripped from every API response	Covered by unit tests

Bottom bar: "Backed by measurement, not only by design: 42 cross-tenant probes and **297** automated tests."

Say this (speaker notes, not on the slide)

The right-hand column is what makes this slide defensible: each claim has a check behind it. The 42 probes were re-run on 27 October, all passing.

SECTION 07 · supervisor's outline: *Technologies et outils utilisés*

Technologies and tools used

3 slides

Slide 25 — **Divider 07** — MOVE

Old slide 18 (was 06). Numeral 07; keep the four stack lines, which are verified.

On the slide

07

Technologies and tools used

One TypeScript stack, and the tools around it

Server: NestJS 11 · Prisma 5 · PostgreSQL 13 · Passport-JWT · Socket.IO 4

Client: React 19 · Vite 7 · TypeScript 5 · Ant Design 6 · TanStack Query 5 · Recharts 3 · Leaflet

Infrastructure: Docker Compose · nginx · GitHub Actions

External services: Groq (LLM) · Brevo (email) · Cloudinary (files) · Typeform (applications)

Slide 26 — **Why these choices** — MOVE

Old slide 19. Eyebrow "07 · TECHNOLOGIES"; content unchanged (Groq running gpt-oss-120b is the configured model).

Slide 27 — **Development tools** — NEW

On the slide

Tool	Used for
Visual Studio Code	Editor for both projects
Git and GitHub	Version control and pull requests
GitHub Actions	Continuous integration on every push and pull request: lint, type check, tests with coverage, build, dependency audit
Docker and Docker Compose	The four-container stack, started with one command
Swagger (OpenAPI)	About 220 documented API endpoints, served at /api
Jest and Vitest	281 server and 16 client automated tests
ESLint and Prettier	Static checks and consistent formatting
PlantUML	The nine UML diagrams: use case, class, sequence, state, deployment
Adminer	Inspecting the database during development

Layout — two-column table like old slide 19's cards, or a 3×3 grid of tool tiles with a one-line purpose each.

Confirm before presenting — do not present this unchecked

Add your Scrum board tool here once slide 18 names it.

Say this (speaker notes, not on the slide)

The stack is on the divider; these are the tools around it. The one to stop on is GitHub Actions: no change reaches the main branch without lint, type check, tests and a build passing.

SECTION 08 · supervisor's outline: *Les parties réalisées*

Completed work

9 slides (+3 optional) · the platform, running

Slide 28 — Divider 08

EDIT

Old slide 23. Title and subtitle change.

On the slide

08

Completed work

What was built, shown on the running application

Slide 29 — The project in figures

EDIT

Old slide 24. One tile changes, and the bottom bar:

On the slide

Tile	Old	New	Source
data models	25	25	schema.prisma
controllers	30	30	backend controllers
pages	55	55	frontend pages
roles	9	9	USER_ROLE, guest included
automated tests	252	**297**	281 server + 16 client, all passing
audit probes	42	42	npm run audit:access, 42/42 on 27 Oct

Bottom bar: “All 297 tests pass · type checking clean on both projects · the whole stack starts with one command”

Confirm before presenting — do not present this unchecked

The old bar said “Continuous integration green”. The October fixes are not committed yet, so CI has not run on them. Commit and push first if you want to keep that wording; the replacement above is true today without it.

Slide 30 — What is finished

EDIT

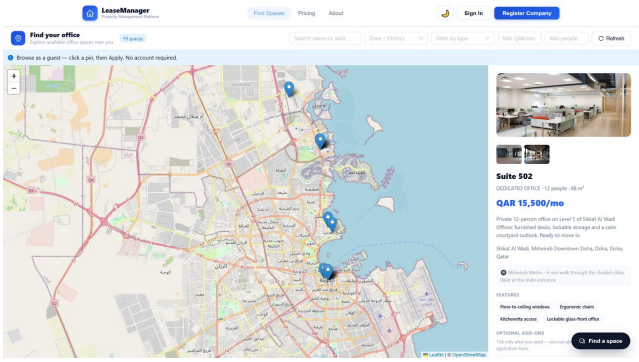

Old slide 25. In the AI column, end the last bullet at “(trade licence, commercial registration)”: drop “the upload interface comes next”, which now belongs to slide 40.

Slide 31 — Visitor: browse, ask, apply

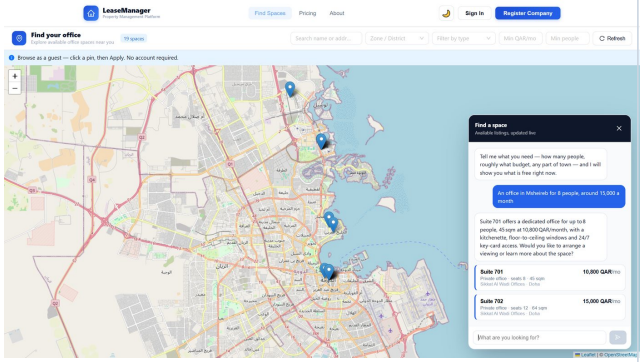

NEW

Two screens side by side.

On the slide

`01-public-map.png`
Public map: published offices with photos, monthly rent in QAR, transport notes and an Apply button. No account needed.

`02-ai-space-finder.png`
Space-finder assistant: a request in plain words, answered with real listings only.

Layout — title on top; the two screens as large rounded frames; one caption line under each.

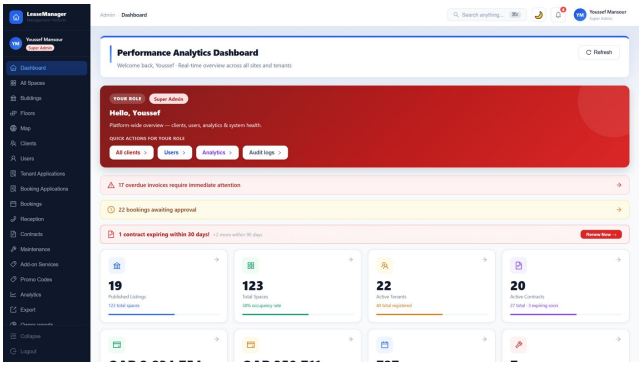

Say this (speaker notes, not on the slide)

A visitor finds a space on the map, or simply asks. The assistant only ever answers with listings the database returned: the model describes them, it never selects or invents one.

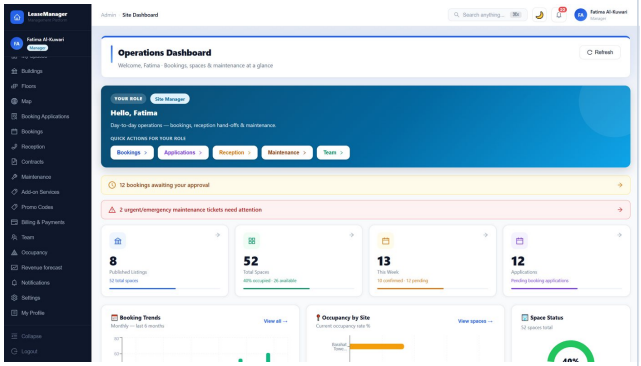

Slide 32 — Two dashboards, two scopes

NEW

On the slide

`04-owner-dashboard.png`
Platform owner: every organisation — 123 spaces, 22 active organisations.

`05-manager-dashboard.png`
Property manager, same screens: 52 spaces, only Msheireb's own buildings.

Say this (speaker notes, not on the slide)

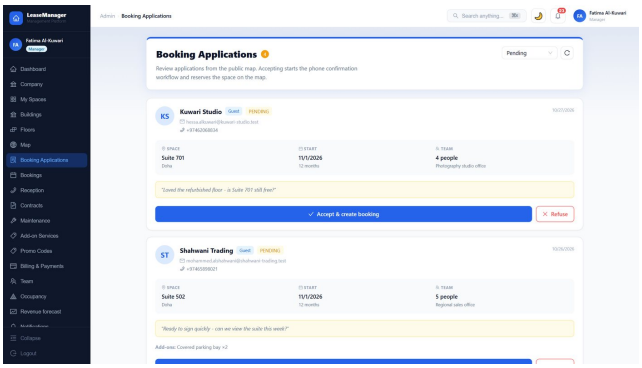

Same application, two scopes. The platform owner is the only account that reads across organisations; a property manager sees her own portfolio and nothing else.

Slide 33

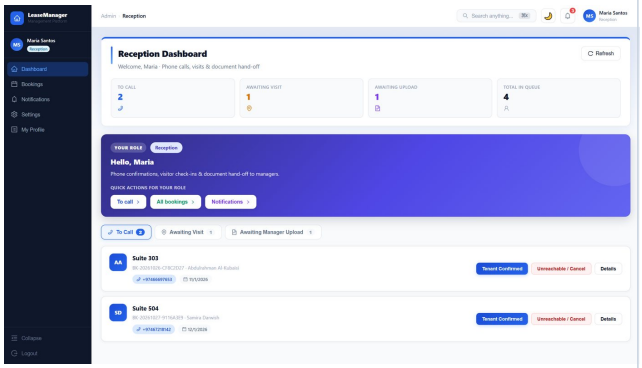

The face-to-face intake, in the software

NEW

On the slide

`06-booking-applications.png`
Applications from the public map, accepted or refused by the manager.

`07-reception-pipeline.png`
Reception: confirmation call, site visit, documents — each a booking state.

Say this (speaker notes, not on the slide)

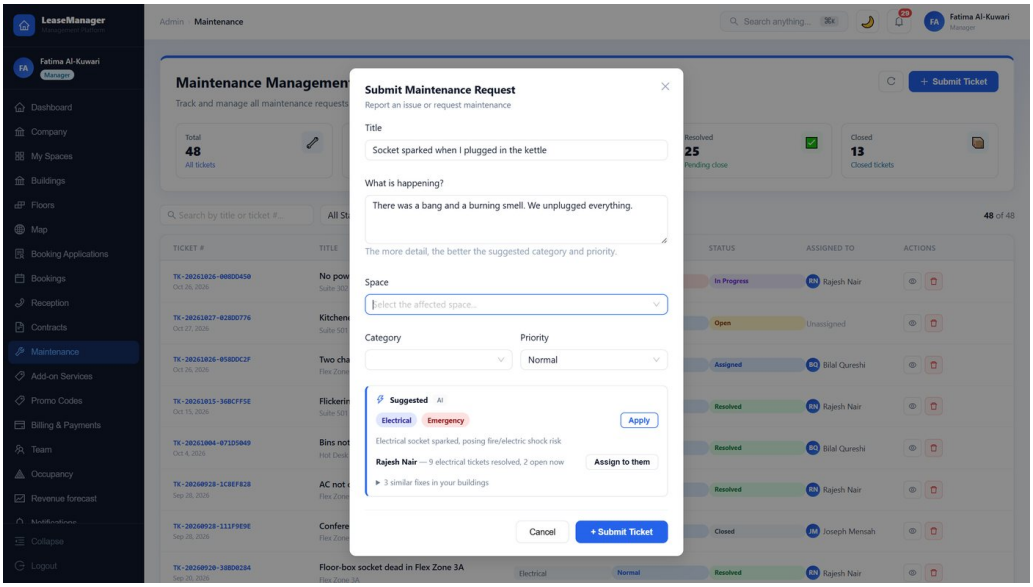

This is the process existing products ignore. Every in-person step has its state, and the receptionist role exists only to carry it.

Slide 34 — Maintenance: the model proposes

NEW

One large screen.

On the slide

`08-ai-ticket-triage.png` — the model suggests Electrical / Emergency with its reason; the technician, Rajesh Nair, comes from ticket history: “9 electrical tickets resolved, 2 open now”.

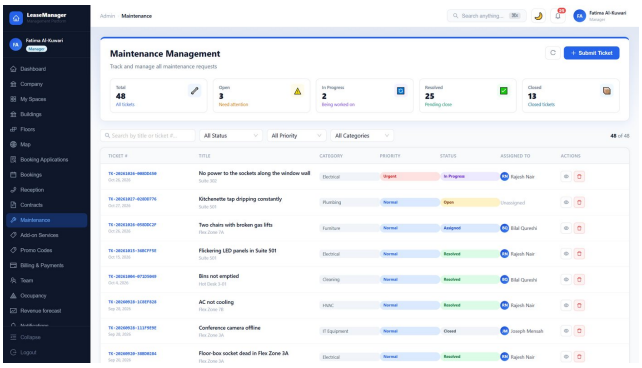

Layout — the screen large on the left two thirds; on the right, two short labels: “Category and priority: the model” and “Technician: ticket history”.

> **Say this (speaker notes, not on the slide)**
>
> *The model proposes, it does not decide. A value outside the application's own list is discarded and a keyword classifier takes over; and the technician is never the model's guess, because a model asked to name a person invents people who do not work here.*

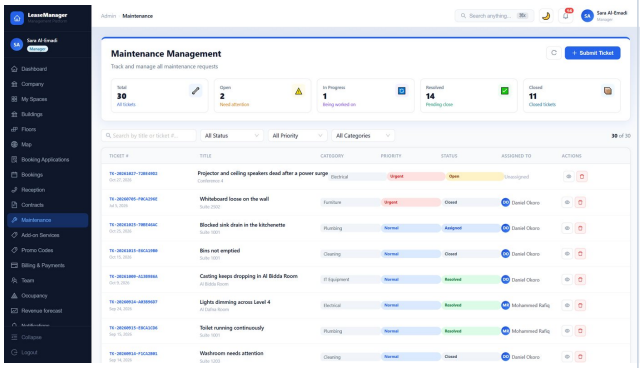

Slide 35 — Isolation you can see

NEW

On the slide

`09-isolation-msheireb.png`
Msheireb's property manager: 48 maintenance tickets.

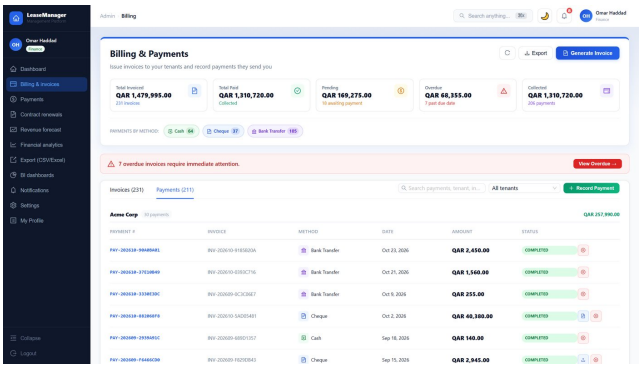

`10-isolation-west-bay.png`
West Bay's property manager, the same screen: 30 tickets, none of Msheireb's.

> **Say this (speaker notes, not on the slide)**
>
> *Two competitors, one installation, the same page: different rows, no overlap. Their totals add up exactly to the platform's 102 tickets — if anything leaked or was counted twice, the sum would not close.*

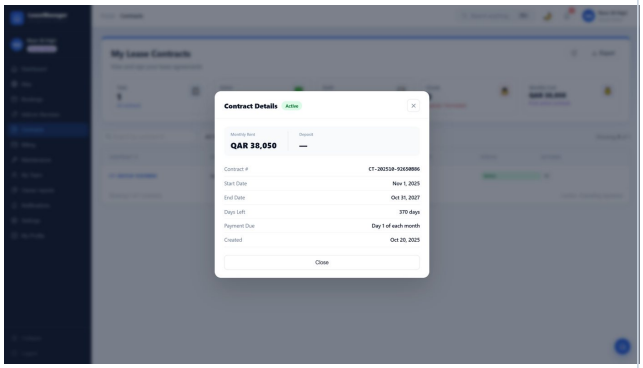

Slide 36 Billing in QAR, and the renter's side

NEW

On the slide

`11-finance-payments.png`
Finance confirms the payments renters report: cash, bank transfer or cheque.

`13-renter-contract.png`
The renter sees the same lease from its side: QAR 38,050 a month.

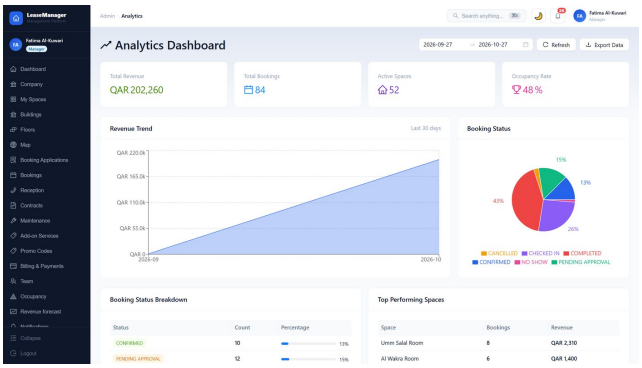

Say this (speaker notes, not on the slide)

No card processor: in this market rent is paid by cheque or transfer, so a named member of staff confirms each payment. On the right, the same lease the landlord manages, seen by the renter.

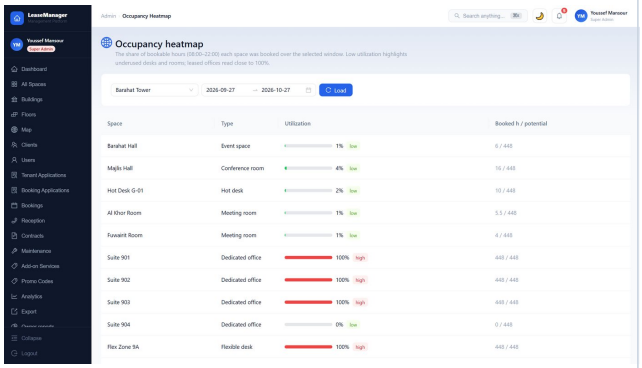

Slide 36b — Analytics and occupancy

OPTIONAL

On the slide

`14-analytics.png`
Analytics per property company: revenue trend, bookings by status, top spaces.

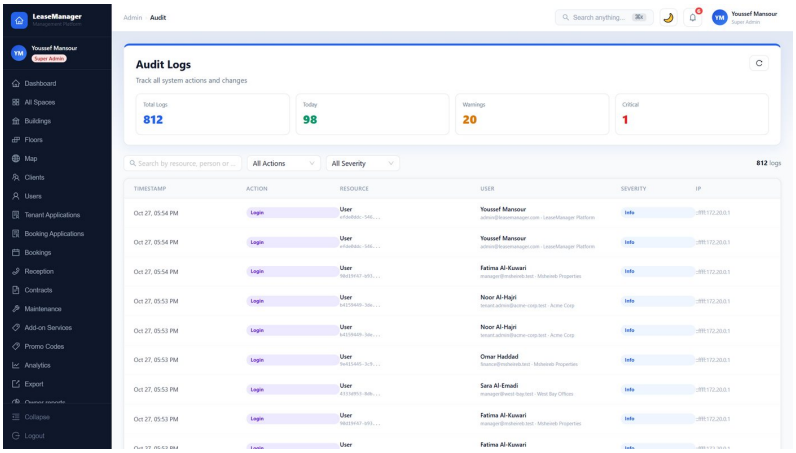

`15-occupancy-heatmap.png`
Occupancy heatmap: the share of bookable hours each space was used.

Slide 36c — The audit trail

OPTIONAL

On the slide

`16-audit-logs.png` — every privileged action with the person, the organisation, the IP address and a severity.

Slide 36d — Live demonstration

OPTIONAL

Only if the defense includes a demo: a full-screen link or embedded video. The recorded walkthrough is `demo-video/out/LeaseManager-demo.mp4`.

> **Say this (speaker notes, not on the slide)**
> *If the room allows it, show the video rather than clicking live: it cannot fail on a network or a login.*

SECTION 09 · supervisor's outline: *Conclusion et perspectives*

Conclusion and perspectives

5 slides

Slide 37 KEEP

Divider 09 · Conclusion and perspectives

Old slide 27.

Slide 38 NEW

Conclusion

On the slide

- A multi-tenant platform for leasing office space, from the public enquiry to the collected rent, used by nine roles across three tenancy levels.
- The face-to-face commercial process modelled as twelve booking states, with a receptionist role built for it.
- Isolation proved by measurement: 42 cross-tenant probes and 297 automated tests, all passing.
- AI that proposes but does not decide: maintenance triage, a space-finder assistant, document reading.

Layout — four short statements as numbered cards, in the style of old slide 25's columns.

Say this (speaker notes, not on the slide)

Four results, each tied to one of the three difficulties named at the start: the model, the process and the isolation — plus the AI, beyond the specification.

Slide 39 MOVE

The finding worth taking away

Old slide 28, now after the conclusion. Content unchanged.

Slide 40 MOVE

Current limitations

Old slide 26 ("What is not done yet"). Retitle it "Current limitations", eyebrow "09 · CONCLUSION & PERSPECTIVES", first column header "Limitation", and reword the first row's reason to the past tense, as below. The project stops here, so these are the boundaries of the result, not work in progress.

On the slide

Limitation	State	Reason
Document-reading interface	Server only	Extraction works; the drag-and-drop into the form was not built
Scanned documents	Limited	The configured model is text-only; Groq offers vision models
External marketplaces	Waiting	Generic adapters for Coworker.com, LiquidSpace; vendor APIs pending
Google Business profile	On hold	Requires a verified account held by the property owner
Production email	Degraded mode	Brevo needs the server's address allow-listed; fallback active
Mobile application	Out of scope	The web interface is responsive

Bottom card unchanged: "Each item has either a degraded mode or a manual equivalent already in place."

Say this (speaker notes, not on the slide)

Said plainly: none of these blocks a business journey. Each has a fallback or a manual equivalent.

Slide 41 KEEP

Perspectives

Old slide 29: document intake, a bounded assistant, learned triage, field application.

Slide 42

Questions

KEEP

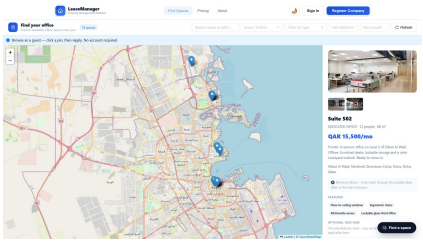

Old slide 30.

SECTION A

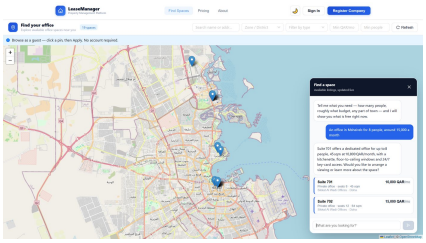

Assets

Screens of the running application and the UML diagrams

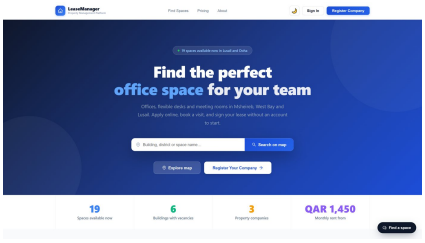

Screens were captured on 27 October 2026 from the running application with the demo data, at 2400×1350 (16:9). The full-resolution PNGs are in `docs/defense-screens/`; the previews below are reduced.

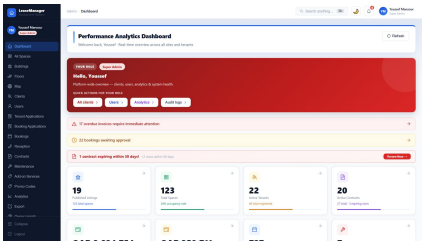

`01-public-map.png`
Guest: public map with Suite 502 open · **slide 31**

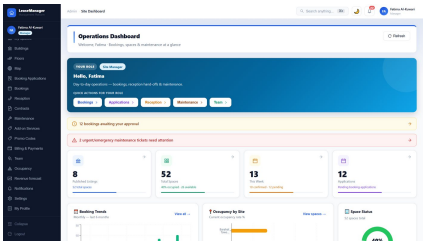

`02-ai-space-finder.png`
Guest: space-finder assistant answering a request · **slide 31**

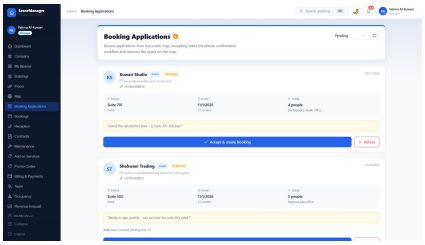

`03-home-page.png`
Public home page with the real listings · **slide spare**

`09-isolation-msheireb.png`
Msheireb manager: 48 tickets · **slide 35**

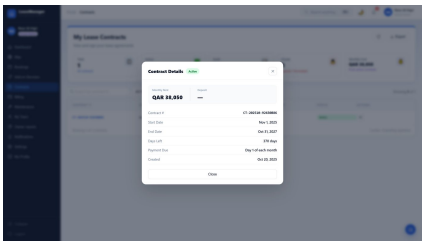

`10-isolation-west-bay.png`
West Bay manager: 30 tickets · **slide 35**

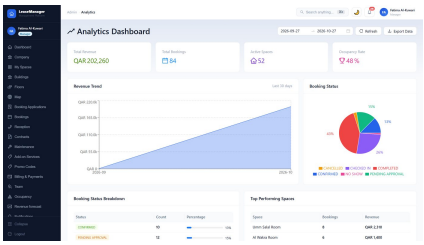

`11-finance-payments.png`
Finance: payments to confirm · **slide 36**

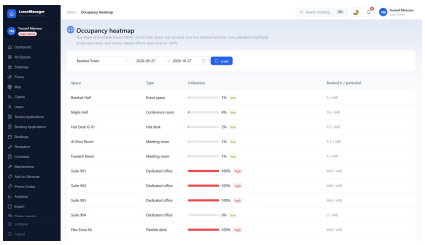

`12-renter-portal.png`
Renter admin dashboard · **slide spare**

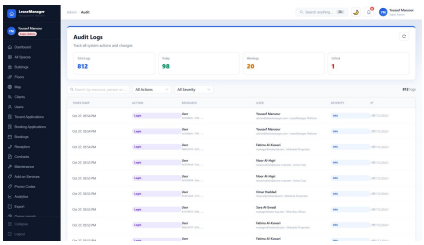

`13-renter-contract.png`
Renter: lease contract details · **slide 36**

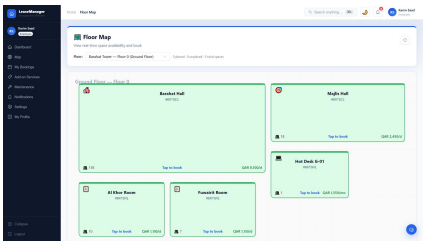

`14-analytics.png`
Analytics (property manager) · **slide 36b**

`15-occupancy-heatmap.png`
Occupancy heatmap · **slide 36b**

`16-audit-logs.png`
Audit trail · **slide 36c**

`17-employee-floor-map.png`
Renter employee: floor map with bookable rooms · **slide spare**

Diagrams (`docs/diagrams/`, rendered from PlantUML)

File	Diagram	Used on
01-use-case-global.png	Use case diagram, nine actors	21
02b-class-diagram-presentation.png	Class diagram, business core	14
07-state-booking.png	Booking state machine, twelve states	23b (optional)
09-deployment.png	Deployment (the deck already draws its own on slide 15)	spare
04-sequence-authorisation.png	Sequence: how a request is authorised	spare, for questions
06-sequence-booking.png	Sequence: booking	spare
08-sequence-ai-triage.png	Sequence: AI triage	spare, for questions
03-package-architecture.png	Back-end package architecture	spare
05-sequence-onboarding.png	Sequence: renter onboarding	spare

SECTION B

Figures and checklist

What was verified, and what to confirm yourself

Figure	In the deck	Verified value	How it was checked (27 Oct 2026)
Automated tests	252	**297**	jest: 281 tests in 23 suites; vitest: 16 tests
Access-audit probes	42, all pass	42, all pass	npm run audit:access against the running stack
Data models	25	25	models in backend/prisma/schema.prisma
Controllers	30	30	*.controller.ts in backend/src
Pages	55	55	*.tsx in frontend/src/pages
Roles	9	9	USER_ROLE, including the guest visitor
Booking states	12	12	BOOKING_STATUS
Space types	7	7	SPACE_TYPE
Database	PostgreSQL 13, 25 tables	PostgreSQL 13.5, 25 tables	running database
LLM	Groq, gpt-oss-120b	Groq, openai/gpt-oss-120b	backend configuration
API endpoints	—	about 220	route decorators in the controllers (221)
Public listings	—	19	public map on 27 Oct; date-dependent

Before the defense — your checklist

1 · Slide 19: replace the proposed sprint dates and contents with your real ones.
2 · Slide 18: name the Scrum master, the board tool, the sprint length and your daily practice.
3 · Slide 17: keep "reviewed at the end of each sprint" only if that is what happened.
4 · Slide 29: commit and push the October fixes if you want to say "CI green".
5 · Choose the optional slides (4b, 23b, 36b–36d) according to the time slot.
6 · Reseed the demo data on the morning of the defense (`cd backend`, `npm run db:seed:full`) if you show the application live.
